FUTURE
SCOPE

Low-Emission Food Services / Reduce Food Waste

The largest share of climate-damaging emissions in Germany occur in the area of nutrition. In 2020, this corresponded to approximately 1.75 tons of CO₂ per person.

Another problem is the food waste produced, which often has to be disposed of unused.

02 CASES wrt Mensa

CASE 1: Food ordered, did not eat

CASE 2: Order prepared, cancelled

02 CASES wrt Dorms

CASE 1: Packaged food is bought in excess
